

“Arrow Geophysics
has two types of
client:

Dave who wants
to find **buried services**,
and Bob who most
certainly does not.”

Dave

Bob

Tel: 01323 645199

Why Bob?

The urban UK subsurface is littered with buried services. Many of these are defunct, and an estimated 15% are undocumented.

Non-metallic pipes and ducts are often not detected by conventional survey techniques, and compressed project lead times mean that accurate information on the location of buried services is often needed without delay.

That way Bob doesn't hit a mains feed or telecoms duct - time (and potentially human lives) saved!

Why Dave?

Arrow Geophysics offers a network of fully-qualified surveyors that respond promptly and enthusiastically to the utility mapping requirements of construction professionals across the south-east of England.

Working for site and contract managers, civil and structural engineers, architects and local authorities, we pride ourselves on our ability to deliver results quickly, accurately and on budget.

Dave can now tap into existing drains and utilities - money saved!

What we do

Arrow Geophysics provides up-to-date information on the location, nature and depth of a wide range of buried services, giving you the peace of mind that comes from a significant reduction in overall project risk.

Utility Markout

Information is marked on the surface of the ground by utility type showing depth to top of service wherever possible.

Utility Mapping

Our topographic surveyor uses Total Station and GPS technology to transfer the survey information to a CAD plan for client use.

Our Location

With surveyors based in Southampton, Guildford, Maidstone and Eastbourne, we are well situated to respond promptly to all your utility mapping needs.

Company Information

Arrow Geophysics specialises in non-intrusive geophysical surveys to locate buried hazards and reduce potential delays on construction sites across the UK.

We identify below ground problems so that you know what you are dealing with, saving both time and money.
